SONNENSCHEIN NATH & ROSENTHAL LLP				DAVIS, DAVID DONALD
P.O. BOX 061080				
WACKER DRIVE STATION, SEARS TOWER				
CHICAGO, IL 60606-1080				2652
DATE MAILED: 11/29/2005				

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>
	09/822,934	MIZUGUCHI, TETSUYA
	<b>Examiner</b> David D. Davis	<b>Art Unit</b> 2652

**– The MAILING DATE of this communication appears on the cover sheet with the correspondence address –**

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

1)  Responsive to communication(s) filed on 08 September 2005.

2a)  This action is FINAL.                    2b)  This action is non-final.

3)  Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **Disposition of Claims**

4)  Claim(s) 1-8 and 10-17 is/are pending in the application.  
4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.

5)  Claim(s) \_\_\_\_\_ is/are allowed.

6)  Claim(s) 1-8 and 10-17 is/are rejected.

7)  Claim(s) \_\_\_\_\_ is/are objected to.

8)  Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

9)  The specification is objected to by the Examiner.

10)  The drawing(s) filed on \_\_\_\_\_ is/are: a)  accepted or b)  objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)  The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

12)  Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)  All    b)  Some \* c)  None of:

1.  Certified copies of the priority documents have been received.

2.  Certified copies of the priority documents have been received in Application No. \_\_\_\_.

3.  Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

1)  Notice of References Cited (PTO-892) 4)  Interview Summary (PTO-413)  
2)  Notice of Draftsperson's Patent Drawing Review (PTO-948) Paper No(s)/Mail Date. \_\_\_\_\_  
3)  Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_ 5)  Notice of Informal Patent Application (PTO-152)  
6)  Other: \_\_\_\_\_

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 8-12, 17 and 18 rejected under 35 U.S.C. 102(e) as being anticipated by Carey et al et al (US 6,452,761). As per claims 1 and 10, Carey et al et al shows in figure 7 a magnetoresistance-effect element including a magnetism-sensing section 88 the electric resistance of which changes in accordance with an external magnetic field. Carey et al et al also shows in figure 7 a low-resistance metal layer 81 contacting the magnetism-sensing section 88. Carey et al et al additionally shows in figure 7 an oxide layer 86 provided on that surface of the low-resistance metal layer 81, which faces away from the magnetism-sensing section 88.

In column 4, lines 56-58, Carey et al discloses that the low-resistance metal layer (not oxidized) has “a thickness of between 5 and 200 Angstroms (i.e. 0.5 and 20 nanometers). In the paragraph bridging columns 4 and 5, Carey et al discloses that the metal layer is then oxidized. In column 5, lines 34-37 Carey et al discloses that there is a 20 % reduction in thickness after oxidization. As a result, Carey et al discloses that a total thickness of the low-resistance metal layer and oxide layer ranges from 0.5 nm to 1.5 nm.

Art Unit: 2652

As per claims 2 and 11, Carey et al et al discloses that the low-resistance metal layer 81 is made of copper. As per claims 3 and 12, Carey et al et al discloses that the oxide layer 86 contains material that oxidizes the element constituting the low-resistance metal layer.

As per claims 8 and 17, Carey et al et al shows in figure 7 magnetism-sensing sections 88 and nonmagnetic metal layers 82, 86 & 81 alternately laid, forming an artificial lattice film, and the low-resistance metal layer 81 contacts the outermost magnetism-sensing section 88.

#### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4-7 and 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carey et al (US 6,452,761). Carey et al discloses the claimed invention and in column 3, lines 5-6 Carey et al discloses that magnetism sensing section 88 is a spin-valve sensor element known in the art, which include pinned and anti-ferromagnetic layers.

Carey et al et al, however, is silent as to the oxide layer 86, the low-resistance metal layer 81, the magnetism-sensing section 88, the nonmagnetic metal layer, the pinned layer and the anti-ferromagnetic layer are provided on a substrate, one laid upon another in the order mentioned.

Art Unit: 2652

Official notice is taken of the fact that spin valves with the magnetism-sensing section, the nonmagnetic metal layer, the pinned layer and the anti-ferromagnetic layer are provided on a substrate, laid upon another in the order mentioned are notoriously old and well known in the art.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide the spin valve of Carey et al with the nonmagnetic metal layer, the pinned layer and the anti-ferromagnetic layer provided on a substrate, laid upon another in the order mentioned as taught in the art. The rationale is as follows: one of ordinary skill in the art at the time the invention was made would have been motivated to provide a spin valve with the nonmagnetic metal layer, the pinned layer and the anti-ferromagnetic layer provided on a substrate, laid upon another in the order mentioned, which is well within the purview of a skilled artisan and absent an unobvious result, so as to effectively optimize spin valve signal.

***Response to Arguments***

Applicant's arguments filed September 8, 2005 have been fully considered but they are not persuasive. Contrary to applicant's assertion in the paragraph bridging pages 7 and 8, Carey et al does in fact disclose "a total thickness of the low-resistance metal layer and oxide layer ranges from 0.5 nm to 1.5 nm", as required by the claims. As stated supra, in column 4, lines 56-58, Carey et al discloses that the low-resistance metal layer (not oxidized) has "a thickness of between 5 and 200 Angstroms (i.e. 0.5 and 20 nanometers). In the paragraph bridging columns 4 and 5, Carey et al discloses that the metal layer is then oxidized. In column 5, lines 34-37 Carey et al discloses that there is a 20 % reduction in thickness after oxidization.

**Conclusion**

5. | Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

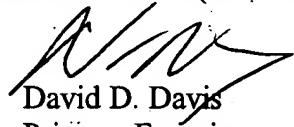

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

6. | Any inquiry concerning this communication or earlier communications from the examiner should be directed to David D. Davis whose telephone number is 571-272-7572. The examiner can normally be reached on Monday thru Friday between 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, A. L. Wellington can be reached on 571-272-4483. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2652

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
